

Quality of Life, Dignity

Introducing what may be the final surgical solution to Female SUI

Emerald Plus

“Endopelvic Free Anchorage” (EFA) is a new tension free tape technique for the treatment of stress urinary incontinence due to urethral hypermobility. Utilizing the Gallini “Emerald Plus” tape, we now have total cure rates of over 95%. Taking into account those cases with improvement, the success rate reaches almost 98%.

EFA is a very short, simple, innovative, and easy to learn technique. This procedure is minimally invasive. Penetration into surrounding tissue is minimized, eliminating any serious complications.

Give your patients back the quality of life and dignity they deserve with this effective and proven product from Gallini Medical Devices.

The Emerald Plus® is quickly becoming the product of choice for physicians in Urogynaecology. With a proven track record, (since its inception in 2001) this unique device is positioned to become the most successful product in the Gallini portfolio. The Emerald Plus® combined with the EFA technique represents the most effective surgical approach for the treatment of female SUI.

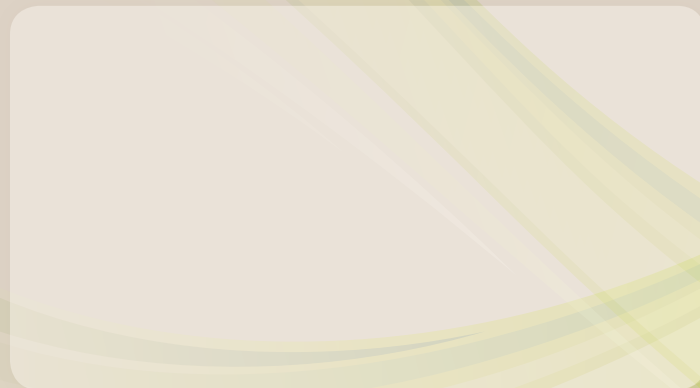

Emerald Plus
